

## Mobiramp MRT

*ALU series  
Ramp on trolley*

*"A UNIQUE Product"*

### Do you recognize this situation?

In all these cases, a MRT mobile ramp from the MOBIRAMP ALU series is the solution to your accessibility problem.

The stage in the hall of the municipality is up to 90cm high. How do we get a wheelchair user on that stage without causing an accident...

I can't get into my house with my wheelchair. Does a good solution exist for bridging those 5 annoying stairs? And it needs to be removable also...

Model	Length cm	Width cm	Advised Height cm	Max. Height cm	Weight kg	Load kg
MRT 32080	320 + 15	80	32	64	58	300
MRT 40080	400 + 15	80	40	80	65	275
MRT 48080	480 + 15	80	48	96	72	250
					* op trolley	

## Mobiramp is your professional advisor, manufacturer and supplier of high-quality accessibility solutions.

Mobiramp is a European company that develops and produces solutions to make houses and buildings accessible. Thanks to our many years of practical experience in solving (temporary) accessibility problems for private individuals as well as in the professional care sector, we always succeed in finding the right solutions. The result is a complete and high-quality range of accessibility products at a friendly price.

### Advantages of the MRT:

#### **MOBILITY:**

The ramp on trolley has 4 wheels and is therefore very easy to move and store. The whole construction consists of 3 separate parts so that you can easily take the ramp with you in your car..

#### **EASY INSTALLATION:**

By using light aluminium, the weight of the ramp is reduced to a minimum. You can set it up in less than 2 minutes with 2 persons.

#### **COMPACT:**

The ramp can be folded compactly with the help of the different handles. This also makes the ramp easy to move on the site where it is used and to transport it over bigger distances even by car.

#### **ANTI-SLIP:**

The surface of the ramp is equipped with a profile with perfect anti-slip properties in all weather conditions.

#### **SAFETY:**

On the sides of the ramp there are solid borders to prevent slide-off accidents. A rubber anti-slip profile on the underside of the ramp ensures that the ramp remains in place on the borders or stairs.

#### **ROBUST:**

Even under heavy loads, the deflection of the ramp is kept to a minimum. The sturdy construction provides a comfortable feeling during use. The hinges were tested under severe conditions

#### **EUROPEAN QUALITY:**

No ramp leaves our production department without a thorough inspection and test of its reliability.

#### **DESIGN:**

Mobiramp has succeeded in combining functionality and a beautiful design by choosing the right materials and colours.

#### **AVAILABILITY:**

Mobiramp always has a large stock of all parts at our production site, which enables us to assemble and deliver quickly.

#### **SUSTAINABILITY:**

All materials used on the ALU ramps are 100% recyclable and therefore good for our environment.

#### **PRICE / QUALITY:**

Because this ramp is modular we can keep prices low and at the same time offer high quality.
